

BK Prosthetic Tube Sock

An Economical Alternative to a Traditional Prosthetic Sock

The Comfort BK Prosthetic Tube Sock is a good alternative to a traditional full featured prosthetic sock, particularly when low reimbursement is an issue. These socks are made using a unique air float terry construction throughout the entire length of the Sock. This allows the socks to offer good comfort and durability. The three ply thickness also makes them an excellent choice as a filler sock.

Features of the BK Prosthetic Tube Sock include:

- All cotton construction provides maximum moisture absorption
- Terry lined for good comfort
- Low profile seam above toe area for additional comfort
- Reversible, and can be worn with either the smooth side or the cushioned side against the skin
- Ideal for wearing multiple layers to achieve desired thickness
- Air float terry construction allows the sock to breathe
- An ideal companion to the Comfort sheath
- Conveniently available in packages of six, with each sock individually wrapped

BK Prosthetic Tube Sock
