

Spectralon™

by Comfort Products

Spectralon™ from Comfort Products combines the exceptional properties of Spectra fibers with the proven characteristics of Nylon in a unique tubular stockinette or tape. Spectra™ fibers from Honeywell have the highest strength-to-weight ratio of any fiber available on the market today. Spectra is commonly used in military armor applications to protect soldiers on the battlefield. It is also used to manufacture gloves worn by workers in sheet metal and glass manufacturing plants. It has a proven track record for strength and durability, yet is extremely lightweight.

Not only is Spectra ten times stronger than steel and 40% stronger than Kevlar, it is four times stronger than Nylon and Polyester and generally stronger than most Carbon fibers.

Spectralon™ combines 65% Spectra with 35% Stretch Nylon to take advantage of the unique properties of each material in a single unique stockinette. Spectralon has excellent strength and saturation characteristics. It also does not run and has a very smooth appearance giving laminations a fine finish. The 280% strength capability of Spectralon allows it to be very form fitting.

Features of Spectralon™ include:

- Cost efficient option to other hi-tech stockinettes on the market
- Allows for a thinner layup, which requires less resin
- Compatible with Acrylic and Epoxy resins
- Lighter weight than other layup materials
- White color permits easy pigmentation
- Exceptional stretch to accommodate rapid size changes
- Lower cost per pound than carbon
- Available as a tubular stockinette and as a tape

Spectralon Part Numbers

Product Description	5 yard roll	15 yard roll	25 yard roll	Per Yard
2" Stockinette	SPS25	SPS215	SPS225	N/A
3" Stockinette	SPS35	SPS315	SPS325	N/A
4" Stockinette	SPS45	SPS415	SPS425	N/A
5" Stockinette	SPS55	SPS515	SPS525	N/A
6" Stockinette	N/A	N/A	SPS625	N/A
8" Stockinette	N/A	N/A	SPS825	N/A
¾" Tape	N/A	N/A	N/A	SPT34
1" Tape	N/A	N/A	N/A	SPT1
1 ½" Tape	N/A	N/A	N/A	SPT15
2" Tape	N/A	N/A	N/A	SPT2
